

Std. 1-5/8 inch OD Model First Time Assembly Instructions

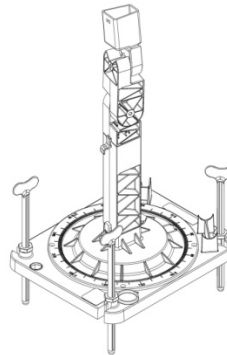

1. Insert the 4 legs into the corners of the base unit tightening the top nut to secure the leg to the base. This should be snug but not tight. Keep legs as short as possible to allow for more stability.

2. Insert the extension into the base. This is an optional unit and is used when the dish needs to be higher and also during setup to let the levels and gauges be higher and easier to work with.

3. Insert the mast assembly into the base or extension.

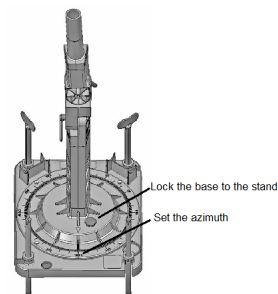

4. Insert the 1-5/8 post in the dish provided by the satellite network provider. Snug the nuts on the clamp, do not tighten.

5. Inset the dish with the post in the mast.

6. Move the azimuth indicator on the base to the 180° (South) azimuth and lock the azimuth base to the stand.

7. Move the dish where the LNB is centered over azimuth 190°. Tighten the clamp to the post.
